

REACH Declaration of Conformity

January 2019

Peltzer GmbH is a manufacturer of handles, knobs, technical plastic parts as well as metal-plastic-combinations.

According to the European Chemicals Regulation REACH, we are considered as "downstream user". As our product lines do not release any hazardous substances providing correct use and storage, Peltzer is exempted from mandatory registration of certain contained substances.

Peltzer observes the current authorization obligations for chemical substances and the defined restrictions on using these substances according to REACH.

Our target is to keep our product lines free from particularly alarming substances according to REACH-directives. To this effect, we observe the „candidate list“ issued by the European Chemicals Agency and regularly evaluate our products accordingly.

If necessary Peltzer takes corresponding measures towards substitution and information of our customers.

Attachment XIV

If our products contain a substance which must be authorized in accordance with the Regulation (EU) 143/2011, we will work towards a substitution of the substance of equivalent quality or its authorization for the relevant uses. Our products contain no substances of the currently valid version of the Annex XVI.

Attachment XVII

With regard to the substance restrictions listed in Annex XVII of the REACH Regulation, we inform you that our products do not contain the currently listed substances above the respective concentration limits and that we comply with the listed restrictions on use.
