

## EG-directives

April 2021

For our Peltzer-products we confirm, that the used raw material meet the requirements of the following directives:

EG directive 2000/53/EC

EG directive 2011/65/EU and 2015/863/EU (RoHS)

EG directive 2003/11/EC

To our present knowledge, the materials we use don't contain any substances listed in the above mentioned directives beyond the defaulted limit. But we can't confirm the total absence of trace of the mentioned substaces like for example Octabrom-and Pentabromdiphenylether.

We don't take tests by ourself if the listed substances in the directives left traces in the used material. We refer to the statements of our suppliers, so that this confirmation is the only valid, if the statements of our suppliers are right and correspond with the truth. Only cost- and time-consuming extern analyses can give here totally certainty.

The compliance with EU directive 2002/95/EC we can't confirm, because this directive regulates the returning of electrical devices and the connected costs.

Please consider, that the responsibility for a product, produced with our product and their compliance with legal requirements, lies in the hands of our customers. Our confirmation doesn't release our customers from their legal obligation.
