

EG-Directives

22. April 2021

For our Peltzer products, we confirm that the raw materials used comply with the following directives:

- EG Directive 2000/53/EC
- EG Directives 2011/65/EU and 2015/863/EU (RoHS)
- EG Directive 2003/11/EC

Based on current knowledge, the materials we use do not contain substances listed in these directives above the default limits. However, we cannot confirm the complete absence of trace substances such as Octabrom- and Pentabromodiphenylether.

We do not conduct testing ourselves to determine if these substances exceed allowable limits in the materials used. Instead, we rely on statements from our suppliers. Therefore, this confirmation is valid only if our suppliers' statements are accurate and truthful. Full certainty can only be obtained through costly and time-consuming external analyses.

Regarding compliance with EU Directive 2002/95/EC, which governs the disposal of electrical equipment and associated costs, we cannot provide confirmation.

Please note that our customers are responsible for ensuring that products manufactured with our materials comply with legal requirements. Our confirmation does not relieve our customers of their legal obligations.

Peltzer & Co. GmbH / Management
